

David Park Omer

Long Beach, CA • david_1428@outlook.com • +1 562-377-6699

Professional Summary

Senior middleware and data platform professional with over 20 years of experience designing, building, and supporting enterprise integration systems and mission-critical applications. Specialized in system integration, SQL Server performance optimization, and middleware architectures enabling reliable data flow across distributed systems. Experienced in API integration, messaging platforms, and performance tuning across on-premise and cloud environments including Azure SQL. Known for rapidly diagnosing complex system issues, improving data flow efficiency, and collaborating across teams to deliver scalable, stable solutions.

Experience

Independent Consultant

04/2024 – current

- Designed and implemented .NET-based integration solutions connecting relational databases and external APIs for small business platforms.
- Built data processing and reporting workflows using SQL and cloud data services to improve visibility and decision support.
- Applied automation and AI-assisted techniques to streamline system workflows and reduce manual operational overhead.

Project Consulting Services, Inc. (via TEKsystems) — Senior Consultant

08/2015 – 04/2024

- Built middleware integrating multiple vendor systems with a SQL-based data warehouse, reducing processing latency from 24+ hours to near real-time.
- Developed SQL coding standards and query design patterns that enabled rapid identification and resolution of performance issues, particularly around table variables and memory-intensive workloads.
- Implemented query tuning and index optimization practices leveraging Azure SQL automatic tuning and industry-standard performance tooling.
- Partnered with development teams to troubleshoot production issues, optimize queries, and improve overall system performance and reliability.
- Supported integration workflows and data pipelines across distributed systems and enterprise applications.

Independent Consultant

03/2014 – 08/2015

- Delivered custom .NET/MVC and browser-based applications using HTML5, CSS3, JavaScript, and SQL-backed application patterns.
- Built responsive UI, database-driven workflows, reporting views, and analytics outputs for small business and enterprise use cases.
- Supported legacy modernization by integrating older systems with web applications, relational databases, APIs, and middleware-style data flows.

Steton Technology Group — Lead Architect

01/2004 – 03/2014

- Led development and operation of a QA auditing SaaS solution supporting thousands of enterprise users for companies including WinCo Foods.
- Designed and implemented a database-driven analytics layer using views to support reporting and BI workloads without impacting transactional systems.
- Optimized database performance and data access patterns to support high-volume, concurrent workloads.
- Led cloud platform initiatives using Azure and AWS to improve scalability, reliability, and system performance.

SeeBeyond — Senior Consultant

10/2002 – 12/2003

- Delivered enterprise integration solutions using SeeBeyond e*Gate and Java across healthcare, government, and commercial systems.
- Built and maintained 400+ system interfaces enabling data exchange across distributed applications.
- Delivered secure, HIPAA-compliant integrations for hospital and clinical systems using HL7 messaging standards.
- Served as lead developer and architect for major integration programs for the US Army's LMP SAP implementation, Regence Health, Commerce One, and Canada Post.

Computer Sciences Corporation — Senior Consultant

10/2001 – 10/2002

- Designed and implemented SAP integration components supporting enterprise system connectivity.
- Delivered integration architecture guidance for NASA's IFMP SAP implementation.
- Developed middleware components using Java and T-SQL for enterprise data integration.

Fluor Corporation — EAI Team Lead

01/1999 – 10/2001

- Led middleware integration efforts for legacy-to-SAP system migrations using SeeBeyond e*Gate.
- Conducted proof-of-concept work using IBM MQSeries and enterprise messaging platforms.
- Collaborated with vendors and enterprise architects to deliver scalable integration solutions.

PM Realty Group — MIS Manager

01/1996 – 01/1999

- Managed IT operations supporting distributed corporate systems and business applications.
- Led network infrastructure upgrades and enterprise connectivity initiatives.
- Developed SQL-based business systems supporting financial and asset management workflows.

Access Development Corp — System Administrator / Programmer

05/1986 – 01/1996

- Developed CRM and shipping system modules supporting internal business operations.
- Migrated legacy systems to a LAN-based client/server architecture, rewriting applications using SQL-based technologies.

Education

Brigham Young University — Computer Science

1985 – 1986

Skills

Integration & Middleware

Enterprise application integration, REST APIs, message-based architectures, distributed systems, service-oriented architecture (SOA), system interoperability

Messaging & Data Movement

HL7/FHIR, MQSeries, MSMQ, RabbitMQ, Apache Kafka, SAP integration, Azure Service Bus

Data & Databases

SQL Server 2022, Azure SQL Database, Azure SQL Managed Instance, PostgreSQL, Redis, SQLite, Oracle (8i)

Database & Performance Engineering

SQL performance tuning, query optimization, indexing strategies, data access patterns, database reliability, high-availability concepts

Programming & Scripting

C#, Java, Python, JavaScript, Bash, PowerShell, T-SQL, PL/SQL

Cloud & Platforms

Azure, AWS, GCP, SaaS platforms

DevOps & Operations

CI/CD, Docker, Kubernetes, system monitoring, troubleshooting, production support

Automation & Orchestration

Apache Airflow, Terraform, GitHub Actions, Jenkins

Architecture & Systems

Microservices, MVC, RESTful APIs, CQRS, 12-Factor App, SOLID

Collaboration & Leadership

Technical mentorship, cross-team collaboration, stakeholder alignment, requirements translation
